

Walshs InvaiderShield

Walshs InvaiderShield is a multi-laminated glass developed to provide effective resistance to forced entry or physical attack.

An aesthetically pleasing alternative to installing security screening or bars to prevent intrusion, Walshs InvaiderShield is 20 times harder to break through than ordinary float glass thanks to an interlayer that is four times thicker than standard laminate.

Walshs InvaiderShield can also be configured with Walshs Performance Low E Glass - providing you with both energy efficiency and security. For additional security, Walshs InvaiderShield can also be produced in a toughened laminate.

Walshs InvaiderShield will help you achieve seamless views, natural light and the look you require – all while staying safe and secure in your commercial space or home.

Benefits of Walshs InvaiderShield

- Walshs InvaiderShield is a Grade A safety glass AS2208.
- Can be supplied as a toughened laminate, with Walshs Performance Low E Glass or incorporated into Walshs TwinSeal DGU.
- Resists forced entry and penetration (the interlayer retains integrity and continues to act as a barrier).
- Superior acoustic performance compared to standard glass.
