

## Walshs Shower Screen

Available in frameless, semi frameless, and fully framed options - Walshs Glass' range of shower screen products will beautifully complement your family bathroom or master ensuite.

Walshs' frameless option is, as the name suggests, frameless. The 8mm or 10mm glass is produced with polished edges and can be installed with Walshs' own range of hardware. For a truly bespoke design, Walshs Digitalart product can also be considered in this application.

Our semi frameless option is a perimeter framed shower unit with a frameless door. Because the glass is encapsulated within the frame, 6mm A Grade Safety Glass can be used in this application. A range of powder coated colours and glass types are available to add a bespoke touch to your bathroom.

Also available is our fully framed shower unit with a fully framed door. In this application, as the glass is encapsulated within the frame 4mm and 5mm A Grade Safety Glass can be used. Our fully framed option also comes in a tri-slider unit, with a wide range of powder coated colours and glass types available to choose from.
