

## Walshs Viewguard Laminate

Walshs Viewguard Laminate is an engineered, toughened laminated and/or heat strengthened balustrade and canopy solution that offers the ability to experience clear unobstructed views, natural light and safety without the need for handrails – all while having the look you require.

Thanks to its Kuraray SGP Interlayer, Walshs Viewguard Laminate is up to 100 times stiffer and five times stronger than traditional interlayers. A frameless solution, it is produced with high quality polished edges, won't collapse when shattered, offers outstanding permanent clarity and is compatible with all standard balustrade and canopy fixtures.

Walshs Viewguard Laminate is an engineered glass product, with engineering required to determine overall thickness, sizing and installation method to meet Australian Compliance.

Note: Frameless balustrades and canopies must be signed off by an engineer before installation.

### Benefits of Walshs Viewguard Laminate

- 5-year warranty against delamination.
- Walshs Viewguard Laminate will not collapse even when shattered.
- Outstanding permanent clarity.
